

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 3 – Mock Interview

Course Code:	DSA03	Course Title:	Natural Language Processing
CO Assessed:	CO5 – Articulation	Assessment:	Assessment Tool 3 – Mock Interview
Weightage:	30% of CIA		
CO5 Statement:	Implement semantic models using predicate logic, word sense disambiguation and validate information retrieval techniques. (BL-5)		
Student Name:	M.Rishitha	Reg. No.:	192424335
Section / Batch:	2024 AIDS	Date:	01-09-2026

Code of Conduct

I M.Rishitha[192424335] (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _Rishitha

Instructions

- Start the mock interview by entering the provided ChatGPT prompt exactly as given in the Annexure A in the next page. Enter your Name and Register Number when requested.
- Answer all 10 interview questions independently and in your own words using mobile chatgpt voice. Do not copy content from external sources or use AI-generated responses during the interview.
- Provide detailed and meaningful answers with appropriate technical terminology, examples, and justifications wherever applicable. One-line answers may lead to lower scores.
- Complete the interview in a single session. Ensure that all 10 questions are answered before requesting the final evaluation and assessment report.
- Submit the final ChatGPT-generated report printout, including the interview questions, your responses, question-wise rubric evaluation, and the Student Average Final Mark, as proof of completion.
- Duration: 30 minutes.

Section / Topic	Focus	Question No.
Discourse & Reference Resolution	Understanding discourse, anaphora resolution, reference tracking, and contextual interpretation in text	Q1
Text Coherence & Discourse Structure	Analyzing coherence relations, discourse organization, and maintaining meaningful text flow	Q2
Dialog Acts & Interpretation	Identifying dialog acts, speaker intentions, and conversational meaning	Q3
Dialog and Conversational Agents	Architecture, components, and working of conversational agents/chatbots	Q4
Language Generation Architecture	Stages of Natural Language Generation (NLG), pipeline architecture, and applications	Q5
Surface Realization & Discourse Planning	Transforming semantic representations into grammatically correct sentences and planning discourse	Q6
Machine Translation – Transfer Approach	Translation process using transfer-based methods and practical applications	Q7
Machine Translation – Interlingua Approach	Language-independent representation and multilingual translation framework	Q8
Statistical Approaches in NLP	Statistical language models, probability-based language generation, and machine translation	Q9
Integrated Case Study (Analytical & Problem Solving)	Real-world scenario involving discourse analysis, conversational agents, language generation, and machine translation	Q10

Annexure A – Mock Interview

CHATGPT PROMPT: copy and paste in your chatgpt

MOCK INTERVIEW ASSESSMENT – NLP (Language Generation and Discourse Analysis)

Act as an expert Technical Interview Panel for Computer Science and Engineering students.

Interview Domain:

Language Generation and Discourse Analysis

Topics:

- Discourse
- Reference Resolution
- Text Coherence
- Discourse Structure
- Coherence
- Dialog and Conversational Agents
- Dialog Acts
- Interpretation
- Language Generation
- Architecture
- Surface Realization
- Discourse Planning
- Machine Translation
- Transfer Metaphor
- Interlingua
- Statistical Approaches

Interview Instructions:

Step 1:

Ask the student to enter:

Student Name:

Register Number:

Step 2:

Conduct a technical interview consisting of exactly 10 questions.

Rules:

- Ask only one question at a time.
- Wait for the student's response.
- Ask conceptual, analytical, application-based, and problem-solving questions.
- Include at least:
 - 2 questions on Discourse and Coherence
 - 2 questions on Conversational Agents and Dialog Acts
 - 2 questions on Language Generation
 - 2 questions on Machine Translation
 - 2 analytical or scenario-based questions

Step 3:

Store every question and answer.

Step 4:

After Question 10, evaluate the student using the following rubric.

RUBRIC

Technical Knowledge (25)

Level 4:

Demonstrates strong and accurate subject knowledge with in-depth understanding

Level 3:

Shows good knowledge with minor gaps

Level 2:

Basic knowledge with noticeable errors

Level 1:

Lacks fundamental technical knowledge

Problem Solving (25)

Level 4:

Solves problems logically and applies concepts effectively in real scenarios

Level 3:

Applies concepts with moderate accuracy

Level 2:

Limited problem-solving ability; requires guidance

Level 1:

Unable to solve or apply concepts

Analytical Thinking (20)

Level 4:

Analyzes questions critically and provides well-structured logical answers

Level 3:

Provides reasonable analysis with some structure

Level 2:

Superficial or partially structured responses

Level 1:

No analytical thinking demonstrated

Communication (15)

Level 4:

Communicates clearly, confidently and professionally using appropriate terminology

Level 3:

Communicates well with minor hesitation

Level 2:
Communication lacks clarity or confidence

Level 1:
Unable to communicate effectively

Confidence (15)

Level 4:
Displays high confidence, positive attitude and professional behavior throughout

Level 3:
Shows good confidence with minor issues

Level 2:
Low confidence and inconsistent behavior

Level 1:
Lacks confidence and professionalism

MARK CALCULATION

Level 4 = 100% of weightage

Level 3 = 75% of weightage

Level 2 = 50% of weightage

Level 1 = 25% of weightage

Technical Knowledge = 25 marks

Problem Solving = 25 marks

Analytical Thinking = 20 marks

Communication = 15 marks

Confidence = 15 marks

Calculate:

Final Score = Sum of all rubric scores

Step 5:

Generate the final report in the exact format below.

MOCK INTERVIEW ASSESSMENT REPORT

Student Name:M.Rishitha

Register Number:192424335

INTERVIEW QUESTIONS AND RESPONSES

Q1:

Question Asked: What is discourse in Natural Language Processing? How is it different from a single sentence?

Student Response:

Discourse in NLP means understanding and analyzing **a group of sentences that are connected to each other** and form a meaningful conversation or text.

A **single sentence** expresses one idea, while **discourse contains multiple sentences** where the meaning of one sentence may depend on the previous or following sentences.

Example: “Ravi went to the shop. He bought some fruits.”

Here, the word “He” refers to Ravi. Understanding this requires looking at both sentences, so it is discourse processing.

Q2:

Question Asked Explain the importance of context in discourse processing.

Student Response:

Context is very important in discourse processing because the meaning of a sentence can change depending on the situation or previous sentences.

For example:

“Rahul went to the bank. He deposited some money.”

Here, context tells us that “bank” means a financial institution.

Context helps NLP systems to:

- Understand the correct meaning of words.
- Resolve references such as “he”, “she”, and “it”.
- Understand conversations correctly.
- Identify the relationship between sentences

Q3:

Question Asked What is reference resolution? Why is it important in NLP?

Student Response:

Reference resolution is the process of finding what a word or phrase refers to in a sentence or conversation.

For example:

“Priya bought a book. She read it at night.”

Here, “She” refers to Priya and “it” refers to the book.

It is important because it helps NLP systems understand the actual meaning of a text or conversation and maintain the correct context.

Q4:

Question Asked Explain the difference between anaphora and cataphora with examples.

Student Response:

Anaphora occurs when a word refers to something that was already mentioned earlier.

Example:

“Ravi bought a phone. He likes it.”

Here, “He” refers to Ravi, which was mentioned before.

Cataphora occurs when a word refers to something that is mentioned later.

Example:

“When he arrived home, Ravi called his mother.”

Here, “he” refers to Ravi, which is mentioned later.

Simple difference:

- Anaphora → reference goes backward.
 - Cataphora → reference goes forward.
-

Q5:

Question Asked “Ravi told Arun that he had won the competition.” Why is reference resolution difficult in this sentence?

Student Response:

Reference resolution is difficult because the pronoun “he” can refer to either Ravi or Arun.

The sentence does not clearly tell us who won the competition.

It could mean:

- Ravi won the competition, or
- Arun won the competition.

Therefore, the NLP system needs additional context or information to determine the correct person.

Q6:

Question Asked What is a dialogue act? List any four types.

Answer:

A dialogue act is the purpose or function of a person's utterance in a conversation. It tells us what the speaker is trying to do.

Four types of dialogue acts are:

1. Question – asking for information.
Example: “What is your name?”
2. Statement – giving information.
Example: “My name is Ravi.”
3. Request – asking someone to do something.
Example: “Please open the door.”

4. Greeting – starting a conversation politely.

Example: “Hello!”

Q7:

Question Asked What is a conversational agent? Give two examples.

Student Response:

A conversational agent is a computer program or AI system that communicates with people using natural language through text or speech.

It can understand user questions and provide suitable responses.

Examples:

1. ChatGPT
 2. Google Assistant
-

Q8:

Question Asked What is coherence and how does it contribute to meaningful communication?

Student Response:

Coherence means that the ideas in a text or conversation are logically connected and easy to understand.

For example:

“Ravi was hungry. He went to a restaurant and ordered food.”

These sentences are coherent because the ideas are connected logically.

Coherence helps communication by:

- Connecting different ideas.
 - Making the text easier to understand.
 - Helping the reader follow the flow of information.
 - Making the overall message meaningful.
-

Q9:

Question Asked What is discourse structure?

Student Response:

Discourse structure refers to the way sentences, ideas, and conversations are organized and connected to each other.

It shows how different parts of a text or conversation are related.

For example, a conversation may have the structure:

Greeting → Question → Answer → Closing

Understanding discourse structure helps NLP systems understand the overall meaning and flow of a conversation or text.

Q10:

Question Asked. What is text coherence?

Student Response:

Text coherence means that the sentences and ideas in a text are logically connected and make sense as a whole.

For example:

“Ravi studied hard for the exam. He prepared notes and practiced questions. Therefore, he scored good marks.”

The ideas are connected logically, so the text is coherent.

In simple words:

Text coherence makes a piece of writing clear, organized, and meaningful to the reader.

RUBRIC EVALUATION

Criterion	Weightage Assigned	Level	Marks Awarded
Technical Knowledge	25	Level X	XX
Problem Solving	25	Level X	XX
Analytical Thinking	20	Level X	XX
Communication	15	Level X	XX
Confidence	15	Level X	XX

SUMMARY TABLE

Technical Knowledge (25)	Problem Solving (25)	Analytical Thinking (20)	Communication (15)	Confidence (15)	SubQ Total	Student Avg Final Mark
Level X	Level X	Level X	Level X	Level X	XX.X	XX.X

OVERALL FEEDBACK

Strengths:

- List strengths

Areas for Improvement:

- List improvements

Interview Readiness:

- Excellent / Good / Average / Needs Improvement

End the report after the Interview Readiness section.

After evaluating each answer, do NOT display the marks immediately.

Store the evaluation internally.

After Question 10 is completed:

1. Generate a Question-wise Evaluation Table for all 10 questions.

2. For each question assign:

- Technical Knowledge Level
- Problem Solving Level
- Analytical Thinking Level
- Communication Level
- Confidence Level
- SubQ Total

3. Calculate SubQ Total using:

Level 4 = 100% weightage

Level 3 = 75% weightage

Level 2 = 50% weightage

Level 1 = 25% weightage

4. Calculate Student Avg Final Mark as:

Average of all 10 SubQ Totals

5. Display:

- Complete interview questions
- Student answers
- Question-wise evaluation table
- Student Avg Final Mark
- Overall strengths
- Areas for improvement

- Interview readiness

Rubrics for Calculation

Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Technical Knowledge	25	Demonstrates strong and accurate subject knowledge with in-depth understanding	Shows good knowledge with minor gaps	Basic knowledge with noticeable errors	Lacks fundamental technical knowledge
Problem Solving	25	Solves problems logically and applies concepts effectively in real scenarios	Applies concepts with moderate accuracy	Limited problem-solving ability; requires guidance	Unable to solve or apply concepts
Analytical Thinking	20	Analyzes questions critically and provides well-structured, logical answers	Provides reasonable analysis with some structure	Superficial or partially structured responses	No analytical thinking demonstrated
Communication	15	Communicates clearly, confidently, and professionally with proper terminology	Communicates well with minor hesitation	Communication lacks clarity or confidence	Unable to communicate effectively
Confidence	15	Displays high confidence, positive attitude, and professional behavior throughout	Shows good confidence with minor issues	Low confidence; inconsistent behavior	Lacks confidence and professionalism

Q. No. / Criteria Level	Problem Understanding	Algorithm Design	Use of Control Structures	Pseudocode Structure	Completeness	Sub. Total	Total %
1	3	3	4	4	4	18	86
2	3	3	4	4	4	18	
3	3	3	4	4	4	18	
4	3	3	4	4	4	18	
5	3	3	4	4	4	18	
6	3	3	4	4	4	18	
7	3	3	4	4	3	18	
8	3	3	4	4	3	20	
9	3	3	4	4	3	20	
10	3	3	4	4	3	18
